

# Applications of dielectric materials

---

# Dielectrics

---

Dielectrics used as electrical insulators should not conduct.

Large breakdown field.

Low AC losses.

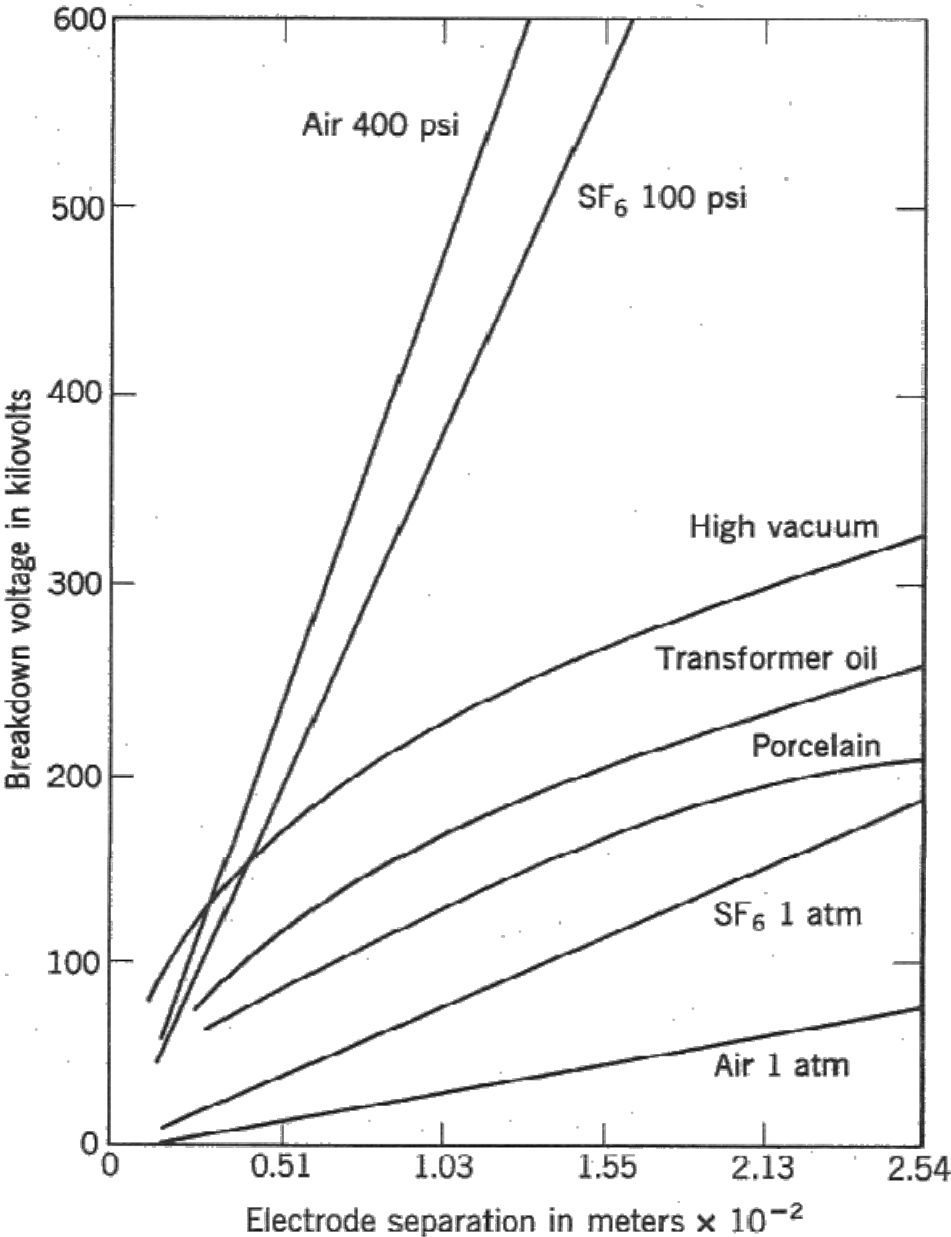

Sometimes a low dielectric constant is desired (CMOS interconnects)

Sometimes a high dielectric constant is desired (supercapacitors).

# Breakdown field

Typically  $10^5$ - $10^6$  V/cm

# AC losses - loss tangent

---

In an ideal capacitor, current leads voltage by  $90^\circ$ .

Because the dielectric constant is complex, in real materials current leads voltage by  $90^\circ - \delta$ .

$$\text{Power loss} = \frac{\omega \epsilon_1 V_0^2}{2} \tan \delta$$

Becomes more of an issue at high frequencies (microwaves)
